

Lead Magento Developer

Job Description

We are looking for an experienced Lead Magento Developer, who has worked on a number of large projects that required customisation of Magento 2 functionality and development of new functionality.

Candidates must be able to advise on technical implementation in order to assist the project team and convert requirements into technical and functional solutions for medium, large and complex projects.

The successful candidate will:

- Ensure that any customisation aligns with the underlying Magento 2 architecture and product roadmap
- Define the architectural approach and develop the integration between Magento 2 and 3rd party applications / legacy systems (fulfilment, PIM, payment etc)
- Provide feature estimates
- Develop and enhance new and existing applications
- Write, test, and deploy code using established standards and procedures
- Understand and adhere to specifications
- Troubleshoot and maintain existing software according to company standards and procedures
- Design and deliver formal or informal training
- Mentor and support other developers
- Review deliverables and provide performance feedback Recommend process and technical improvements
- Lead and mentor other developers (some of whom will not have Magento 2 experience)

Essential/Required Experience:

- Able to develop bespoke Magento 2 extensions based on client briefs
- Experience in software development including experience developing in Magento 2
- Good communication skills/proven record of providing technical direction and leading a team
- Very experienced in integrating Magento to 3rd party applications / legacy systems (fulfilment, PIM, payment etc)

- Expertise with development life-cycle methodologies and best practices
- Experience of Continuous Integration
- Experience/Understanding of OOP
- Experience developing Magento modules
- Experience with HTML, XHTML, CSS, JAVASCRIPT, XSL
- Experience of Linux, Apache, Mysql, PHP, nginx, Vagrant
- Good communication skills/proven record of providing technical direction
- Strong eCommerce background
- Strong relational database skills
- Experience working on Open Source projects
- Integration with backend systems via webservice.

The successful candidate will be:

Talented, enthusiastic, focused, professional, and have an eye for detail. Keen to learn and find new ways of doing things. A team player who is proud of your work and wants to share with everyone! You like working in a fast-paced environment and are driven by the desire to improve the online purchasing experience for everyone, no matter what they are buying and from where!
